

The 5 AI Security Risks Threatening Your Business Right Now

Free risk overview used by 500+ security practitioners • AITrustAudit.com

AI SECURITY RISK OVERVIEW

Securing the Intelligent Future

CRITICAL

Shadow AI

Unauthorized tools your team is using right now

Employees are already using ChatGPT, Gemini, and dozens of other AI tools without IT or security awareness. Every prompt may contain sensitive IP, PII, or regulated data — exfiltrated with zero

→ [Audit tool usage](#) • [Enforce an AI acceptable use policy](#) • [Deploy monitoring](#)

HIGH

Client Data in AI Training Pipelines

Data entering vendor models without consent

Many AI platforms retain user inputs for model improvement by default. Without explicit opt-out or enterprise agreements, your client data — and your contractual obligations — are at risk.

→ [Review vendor DPAs](#) • [Opt out of training data programs](#) • [Update client contracts](#)

HIGH

No AI Acceptable Use Policy

Zero legal protection — right now

Without a written policy, you have no defensible position when a breach or misuse incident occurs. Regulators, auditors, and legal counsel will ask for it immediately.

→ [Draft AUP now](#) • [Define permitted tools, data classes, and use cases](#)

HIGH

Compliance Exposure

HIPAA, GDPR, and SOC 2 blind spots

AI tools introduce new data processing vectors not covered by existing compliance programs. PHI in medical prompts, personal data in EU client interactions, and SOC 2 control gaps are already

MEDIUM

Unchecked AI Vendor & Third-Party Risk

Your supply chain's attack surface just expanded

AI vendors, plugins, and integrations each represent a new third-party risk vector. Most organizations have no AI-specific vendor assessment process, leaving contract, security, and
